

BOUNDARYLINE

CROSS EVERY BOUNDARY

Website Design & Build Specification

Prepared for the development team

Monochrome • Motion • Cricket

1. Project Overview

Boundaryline is a event management company. This document is the full content and design brief for the tournament website: what each section contains, how it should look, and how it should behave. Build sections in the order listed — this is also the intended scroll order of the homepage.

BRAND LINE

“Cross every boundary.” Use this as the tagline throughout — in the hero, in the browser tab title, and in the footer.

DESIGN THEME

- Strict two-tone palette: black and white, with grayscale photography. No colour accents except where noted for live/score states.
- One signature animation: a grass field with an animated cricket ball-and-bat interaction (detailed in Section 3). This is the site's memorable moment — everything else stays quiet and disciplined around it.
- Interactive, scroll-driven, and responsive. Every section should feel considered, not templated — no generic stat-card grids or stock icon rows.

2. Design Tokens

2.1 Colour palette

Ink Black	#0B0B0B — primary background, primary text on white
Pure White	#FFFFFF — primary background alternate, primary text on black
Pitch Gray	#3A3A3A — secondary text, muted UI
Chalk	#F4F4F2 — off-white section backgrounds, card fills
Line Gray	#D9D9D6 — hairlines, dividers, borders
Willow (accent — use sparingly)	#C9A227 muted gold OR pure grayscale only — reserve for a single live/highlight state (e.g. “LIVE” badge). Confirm with client before using any colour at all; default to zero colour.

2.2 Typography

Display / Headings	A tall, condensed, geometric sans with a technical feel — e.g. Bahnschrift, Neue Machina, or Druk. Used bold, uppercase, tightly tracked for H1/H2 only.
Body	A clean humanist sans — e.g. Inter or General Sans. Regular weight, generous line-height (1.5–1.6) for readability.
Mono / Labels	A monospace face — e.g. JetBrains Mono or Space Mono — for eyebrows, stats, scoreboard-style numbers, and timestamps. Reinforces the “scoreboard” feel.

2.3 Layout system

- 12-column grid, max content width 1280px, generous 96–140px section padding on desktop, 32–48px on mobile.
- Section rhythm: every section transition is marked by a thin horizontal hairline (1px, Line Gray) — not a hard colour block. Alternate black-on-white and white-on-black sections to create a scoreboard-flip pacing as the user scrolls.
- Grid is asymmetric where it helps hierarchy (e.g. Gallery, Team) — avoid perfectly even 3-column stock layouts throughout.

3. Signature Element: The Field Animation

This is the one place the site takes a visual risk. Keep every other section quiet so this lands.

3.1 Concept

A thin strip of animated grass sits along key section boundaries (hero base, and the divider above “What We’ve Achieved”). Individual grass blades are simple SVG/CSS shapes that sway gently on a loop (CSS keyframe transform, 3–4s ease-in-out, staggered per blade so it reads as wind, not a repeating tile).

On the hero specifically: a cricket ball animates in from off-screen, a bat silhouette swings on scroll or on load, and the ball redirects — like a cover drive — into the word “BOUNDARYLINE”, which reacts with a subtle impact flash (a single white flash frame, no colour) as the ball crosses the boundary rope illustration at the base of the hero. This ties the tagline, the name, and the sport into one physical moment.

3.2 Behaviour rules

- Runs once on page load (respect prefers-reduced-motion — replace with a static illustration + fade-in for users who have that setting on).
- Grass blades: pure CSS/SVG, no video, no heavy JS libraries — keep it lightweight.
- Bat/ball sequence: SVG or Lottie, triggered on load, skippable (a scroll or click interrupts and jumps straight to the settled hero state).
- Grass strip reappears (looping ambient sway only, no bat/ball replay) at the Gallery and Achievements dividers to bookend the page rhythm.

4. Page Sections

Each section below lists: purpose, content to include, and layout/interaction notes. Build in this order.

4.1 Hook & Hero Banner

Purpose	First impression. Establish tournament identity, date/location if known, and the signature animation.
Background	Full-bleed grayscale photo collage/carousel — see 4.1.1 below for the 23-photo treatment.

Foreground content	Wordmark “BOUNDARYLINE” (large, condensed, bold) + tagline “Cross every boundary.” + one primary CTA button (“Get tickets” / “View schedule” — confirm actual CTA with client) + a secondary text link (“Watch the trailer” or similar, optional).
Animation	Grass + bat + ball sequence per Section 3, playing over/behind the photo banner on load.
Scroll cue	Small animated downward chevron or “Scroll” label, bottom-center, gently bobbing.

4.1.1 The 23-photo banner

The hero uses 23 photographs to build a dense, kinetic opening — not one hero image. Recommended approach:

- A scrolling multi-row photo wall (3–4 horizontal rows) where each row auto-scrolls at a different speed and direction (parallax marquee). Rows pause on hover so a user can look at a single frame.
- All 23 photos are desaturated to grayscale via CSS filter (grayscale(100%) contrast(1.05)) to hold the black-and-white theme even if source photos are in colour.
- A dark gradient overlay (black, 20%–70% opacity bottom-to-top) sits over the photo wall so the white wordmark and CTA stay legible on top.
- Photo subject mix (fill with real tournament photography): action shots mid-swing/mid-bowl, crowd energy, trophy/award moments, close-ups of the ball/pitch/kit, wide stadium shots, candid team moments. Avoid repeating near-identical crops.
- Mobile: collapse to a single auto-advancing row or a slow crossfade slideshow of the same 23 images to protect load time and legibility.

Technical note for the developer: lazy-load images below the fold; only the first 6–8 hero photos should load eagerly. Serve responsive image sizes (srcset) — 23 full-resolution photos loaded eagerly would hurt performance.

4.2 Why Boundaryline

Purpose	Explain what makes this tournament worth attending/following — the differentiator section.
Content	A short intro line + 3–4 reason points (e.g. calibre of teams, format/innovation, community impact, production quality — replace with real reasons from the client).
Layout	Editorial split layout: large statement headline on the left third, reasons listed on the right two-thirds as a numbered or lettered list with short supporting copy — not icon cards.
Interaction	Each reason fades/slides in on scroll, staggered by ~100ms per item.

4.3 Vision

Purpose	Where the tournament is headed — long-term ambition.
Content	1 short paragraph (2–4 sentences) in the tournament's voice. Placeholder: “Our vision is to build the region's most competitive and watched grassroots cricket

	tournament — a stage where talent is discovered, rivalries are born, and every boundary hit means something.” Replace with client's real vision statement.
Layout	Full-width black section, white centered text, large line-height, generous vertical padding — a quiet, confident “manifesto” moment against the more visual sections around it.

4.4 Mission

Purpose	What the tournament actually does, concretely, to pursue the vision.
Content	1 short paragraph or 3 mission pillars (e.g. “Discover talent” / “Elevate the format” / “Build community” — replace with real pillars).
Layout	White section directly following the black Vision section, so the two form a visual pair (dark statement → light explanation). If using pillars, lay out as 3 columns with a thin vertical divider between each, mono-style numbering if it reflects a real sequence, otherwise unnumbered.

4.5 What We Have Achieved

Purpose	Proof and credibility — track record so far.
Content	A set of milestone stats (e.g. editions held, teams participated, matches played, attendance, viewership — replace placeholders with real figures) plus 2–3 short milestone callouts (notable wins, media coverage, expansion).
Layout	Scoreboard-style stat row using the mono font, large numbers with small mono labels beneath — evokes an actual cricket scoreboard rather than a generic stat-card grid. Numbers count up on scroll-into-view (0 → final value, ~1.2s ease-out).
Animation	Ambient grass strip divider (see 3.2) sits above this section as a bookend to the hero.

4.6 Gallery

Purpose	Visual proof of atmosphere and past editions.
Content	Curated grayscale photo grid — can reuse selects from the 23 hero photos plus additional match/event photography.
Layout	Masonry/asymmetric grid (varied tile sizes, not a uniform square grid) to avoid a templated feel. Optional light filter tabs (“Action” / “Crowd” / “Awards”) if the photo library is large enough to warrant it.
Interaction	Click/tap opens a full-screen lightbox with left/right navigation and a visible counter (e.g. “04 / 23” in mono font, scoreboard-style).

4.7 Testimonials

Purpose	Social proof from players, captains, sponsors, or attendees.
Content	3–6 short quotes with name, role/team, and optionally a small grayscale headshot.
Layout	Horizontal auto-advancing carousel OR a scroll-snapping row the user can drag — avoid a plain centered single-quote block. Large opening quotation mark in the display font as a graphic element.
Interaction	Auto-advance every 6–8s, pauses on hover/touch; manual prev/next arrows; dot indicators in mono style (e.g. “01—06”).

4.8 Team

Purpose	Introduce the organizers/core team behind the tournament (or the competing teams — confirm which with the client if ambiguous; this spec assumes organizing team/staff).
Content	Name, role, and grayscale photo per person; optional one-line bio or a social/contact icon.
Layout	Grid of portrait cards, photos grayscale by default, gaining full contrast/slight colour or brightness lift on hover to feel alive without breaking the monochrome rule at rest.
Interaction	Hover reveals name/role as an overlay sliding up from the bottom of the portrait; keyboard-focusable for accessibility parity with hover.

4.9 Footer

Content	Repeat wordmark + tagline, quick nav links to each section, social links, contact/sponsor enquiry link, copyright line.
Layout	Black background, white text, thin top hairline. Keep dense but calm — this is the site's resting state after the motion above.

5. Interaction & Animation Summary

Consolidated list for the developer — every animation on the site in one place:

- Hero: 23-photo multi-row parallax marquee, grayscale filter, gradient overlay, load-in bat/ball/grass sequence, bobbing scroll cue.
- Grass strip: swaying CSS/SVG blades, looping, reused at 2 section dividers (post-hero settle, and above Achievements).
- Why Boundaryline: staggered fade/slide-in reasons on scroll.
- Achievements: count-up numbers on scroll-into-view.
- Gallery: masonry grid, full-screen lightbox with counter and keyboard arrow-key navigation.
- Testimonials: auto-advancing draggable carousel, pause on hover/touch.
- Team: hover/focus reveal of name and role over grayscale-to-contrast photo transition.
- Global: smooth scroll between sections; all animations respect prefers-reduced-motion by falling back to static/fade states; all interactive elements have a visible focus ring for keyboard users.

6. Technical Notes

Responsiveness	Design mobile-first for the marquee, masonry grid, and carousel — all three are the highest-risk components on small screens. Test at 375px, 768px, 1280px, 1440px.
Performance	Lazy-load all images below the fold; compress and serve responsive sizes (srcset/WebP) for all 23+ gallery photos; keep the grass/bat/ball animation as lightweight SVG or CSS, not video.
Accessibility	Alt text on every photo; visible focus states; reduced-motion fallback; sufficient contrast even within the strict black/white palette (test white-on-black and black-on-white body text against WCAG AA).
Content to source from client	Final CTA wording, real vision/mission copy, achievement stats, testimonial quotes and names, team names/roles/photos, and the 23 hero photographs plus gallery photo set.
